## Abstract

Toggle the LaTeX variable `editmode` in the main source file to show/hide the bullets and labels. If switching the edit mode results in a compilation error, just delete the `.aux` file.

If the LaTeX variable `singlenarrowcol` is 1, then each page contains a single column whose size equals the size of each of the columns in a double-column layout. This is convenient for editing and reviewing the document in a laptop screen. The number of pages when `singlenarrowcol` is 1 is roughly twice the number of pages when `singlenarrowcol` is 0.
